Phone: 610-286-0018 • Fax:610-286-0021
Email: info@mypetsbrace.com

Thank you for contacting My Pet's Brace. We look forward to helping your dog/patient walk and play comfortably again with the help of a custom brace. An effective custom brace starts with the creation of a well-formed cast taken by a veterinarian or rehabilitation professional.

If the veterinarian or rehabilitation facility does not have the materials to make the fiberglass cast, a casting kit may be ordered from the My Pet's Brace website or by calling 610-286-0018.

Please follow the process below:

Step 1: Veterinarian or rehabilitation professional reads the casting instructions below and watches the *Carpal Brace Casting Tutorial* video at *mypetsbrace.com/casting-videos*.

Step 2: Veterinarian or rehabilitation professional takes a cast of the dog's leg.

Step 3: Veterinarian or rehabilitation professional completes the *Carpal Brace Order Form*.

Step 4: Mail the cast and *Carpal Brace Order Form* to My Pet's Brace in Morgantown, PA (address above).

Step 5: Email or text a side view picture of the dog standing to info@mypetsbrace.com/610-286-0018.

Step 6: Once the cast is received, My Pet's Brace calls the purchaser of the brace to take payment and provide the specific date the brace will be completed and shipped from our facility.

Braces are fabricated in 5 business days and include a no-hassle 120 day warranty. The brace may need to be mailed back to My Pet's Brace for adjustments. This is a normal part of the brace process. Because our devices are custom-made and will not fit any other pet, no refunds can be offered by My Pet's Brace. Visit our website for more information.

CARPAL BRACE CASTING INSTRUCTIONS

1) Watch *Carpal Brace Casting Tutorial* video at *www.mypetsbrace.com/casting-videos.*

*** CAST MUST INCLUDE THE ENTIRE PAW, WITH THE PAW POSITIONED FLAT ON THE GROUND.**

Scan Me

2) Have a helper sit on the opposite side of the dog's injured leg. The helper will hold the stockinet and rubber tubing cutting strip with one hand and support the dog from sitting with the other hand underneath the dog's belly. Position the dog in a normal/corrected standing position, **with the dog's paw flat on the ground (90° angle).** If there is a contracture, cast the leg in the most functional position. There is no need to sedate the dog (unless there are extreme circumstances).

3) Have a bowl of lukewarm water, a sharp utility knife, a pair of bandage scissors, a marker, and a plastic support board readily available.

4) Hold the casting tape underwater for 10 seconds, then squeeze water out three times.

5) Start the cast by quickly wrapping the tape distally, then cover the entire paw and move up the leg to just below the elbow. Overlap each layer no more than 2-3 times, cutting off any excess tape not needed. Do not squeeze paw together.

6) Mold the tape to conform to bony prominences. Massage the layers together. Place the support board beneath the paw to prevent the tape from sticking to the floor and help keep the paw flat on the ground.

7) Use the permanent marker to trace the rubber tubing. Draw several hash marks perpendicular to the rubber tubing line.

8) Use the utility knife to cut the cast off before the casting tape completely hardens (less than 4 minutes). Do not wait too long. Cast will still be a little soft.

9) Remove the rubber tubing cutting strip. Cut the stockinet off with the bandage scissors and remove the cast from the dog's leg.

10) Tape or rubber band the cast together without deforming the cast. Write the dog's name on the cast.

11) Complete the *Carpal Brace Order Form* and record all measurements in centimeters using a soft tape measure.

Length Measurement 1 – Elbow joint to carpal joint

12) Length Measurement 2 – Carpal joint to floor

13) Length Measurement 3 – Length of paw, include nails

14) Circumference Measurement 1 – At elbow joint

15) Circumference Measurement 2 – At mid forearm

16) Circumference Measurement 3 – At carpal joint

17) On the back of the *Carpal Brace Order Form*, take a tracing of the dog's paw while the dog is standing.

18) Email a side view picture of the dog while he/she is standing. Take the picture at dog's eye level. Do not take the picture while the cast is on the dog's leg.

19) Mail cast and *Carpal Brace Order Form* to:
